

### III. Amendments to the Abstract

Please amend the Abstract as follows:

#### ABSTRACT

#### ~~“AN AIR-BAG”~~

A side air bag  $[(1)]$  is disclosed for a motor vehicle, and takes the form of a three-dimensional airbag which is formed from two super-imposed layers  $[(2, 3)]$  of fabric. The super-imposed layers  $[(2, 3)]$  of fabric, when laid flat, have ~~at least~~ a substantial common area of super-imposition. Infill pieces  $[(42, 43)]$  formed from either at least one gusset forming insert or from a portion or portions of fabric of one or both of the fabric layers  $[(2, 3)]$  which extend beyond the area of super-imposition are provided. The air-bag  $[(1)]$  has an inflatable region towards the upper part of the air-bag  $[(1)]$  and an inflatable region towards the lower part of the air-bag  $[(1)]$ . The two inflatable regions are separated by a part of the air-bag which is constrained when the air-bag is inflated, to have a thickness less than the thickness of either of the said regions.
